THREAT

\$26B in Losses due to Power Surges

Today's increased reliance on very sensitive electronics and processes make surge protection an important discussion topic in order to avoid catastrophic business losses. The Insurance Institute for Business & Home Safety study found that \$26 billion dollars was lost due to non-lightning power surges. In addition, there are about 25 million lightning strikes in the US each year that cause between \$650M to \$1B in losses according to the Insurance Information Institute, State Farm©.

1. Direct Strike

2. Earth Potential Rise

3. Strike on Overhead Lines

4. Coupling

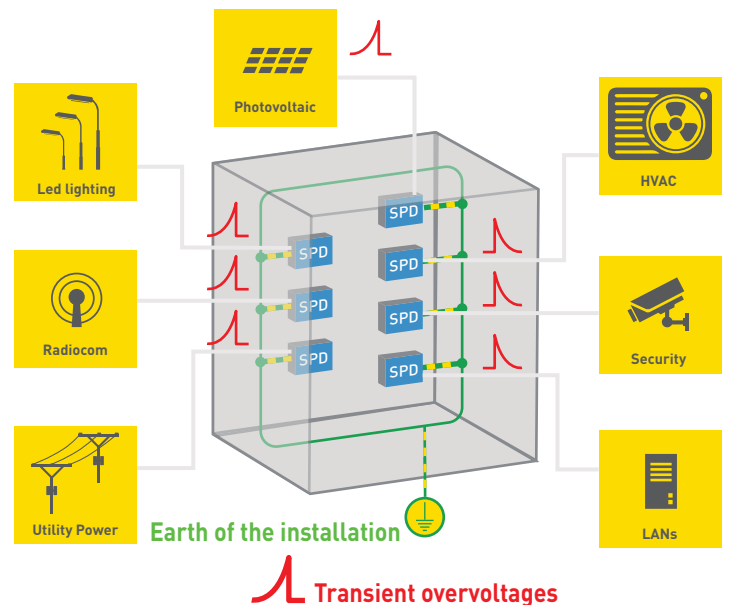

5. Switching

SOLUTION

Global Surge Mitigation Concept

Our philosophy is simple – determine your risk and evaluate every line (power or signal) for vulnerabilities. We call this "The Box Concept." It works equally well for a single piece of equipment or an entire facility. Once you have determined your "boxes", it is simple to develop a coordinated protection scheme to eliminate all threats from lightning and switching surges.

CITEL provides a wide range of surge protectors adapted to every network: **AC Power, DC Power, Telecom, Data and Coaxial.**

COMMON WATER & WASTEWATER APPLICATIONS

As the systems required for Water & Wastewater Treatment Plants become more sophisticated, the risk of damage caused by lightning strikes and power line disturbances becomes more evident. Vital Treatment Systems must deploy a coordinated system of Surge Protective Devices (SPDs) to ensure continuous operation.
